General Remarks

The database *Political Parties, Presidents, Elections, and Governments (PPEG)* combines data on election results and governments in 73 democracies in Africa, the Americas, Asia, Australia, and Europe. The current version covers the period between 1942 and 2025 (Oct 31) and contains information on 3301 political parties, 1100 parliamentary elections, 402 presidential elections, and 2044 governments.

The data is separated in four different files:

- data on parliamentary elections to the national lower chambers
- data on presidential elections
- data on national governments
- combined data on national governments and corresponding parliamentary elections

You can download each of these datasets on <https://www.ppeg.wzb.eu>.

The Parliamentary Election Data includes information on political parties' vote and seat counts in elections to the national lower houses. In addition, the data documents political parties' memberships in electoral pacts.

In case of questions or comments, please contact ppeg@wzb.eu.

Coverage

Country	Time	Political Parties	Elections	Unique Observations
Albania	1991-2025	23	11	115

Notes on political parties

Political parties were included following three criteria:

1. The party has won a seat in at least one election covered by the dataset.
2. The party has put a candidate in a presidential election. In presidential elections with many candidates (> 10), however, those contestants gaining less than 0.5% of the vote were subsumed in the residual category "Others".

3. The party has been part of or supported a cabinet during the time covered by the dataset.

If political parties contested elections as part of an electoral pact, the votes and seats of the single parties were documented as far as possible. If this information is missing, only the election results of the corresponding electoral pact is documented. See also the variables *estimate* and *estimate_2ndtier* for more information.

Notes on electoral systems

Mixed member majoritarian electoral systems¹ (e.g. Italy 1993-2005, Bulgaria 1990 and 2009, Croatia 1993-2001, North Macedonia 1998) that combine proportional representation in one tier with majoritarian representation in a second tier are indicated by the variable *mmm*. As far as information is available (see variable *mmm_doc*), the data covers election results on both tiers. In these cases, the variables *electorate*, *total_vote*, *valid_vote*, *total_seats*, *votes*, *v_share*, and *seats* give the respective values in the proportional component. The variables *electorate_2ndtier*, *total_vote_2ndtier*, *valid_vote_2ndtier*, *total_seats_2ndtier*, *votes_2ndtier*, *v_share_2ndtier*, and *seats_2ndtier* denote results in the majoritarian component. In all other cases, the latter variables are set to missing. In some cases, the data set lists vote counts for both tiers but only provides aggregate seat counts for the respective political parties.

In systems **combining proportional representation in a nationwide constituency and in multi-member districts** (Nicaragua, Guatemala) the variables *electorate*, *total_vote*, *valid_vote*, *total_seats*, *votes*, *v_share*, and *seats* contain information on the national constituency whereas the variables *electorate_2ndtier*, *total_vote_2ndtier*, *valid_vote_2ndtier*, *total_seats_2ndtier*, *votes_2ndtier*, *v_share_2ndtier*, and *seats_2ndtier* denote results in the multi-member districts. The variables *mmm* and *mmm_doc* are set to “no”.

In **mixed member proportional (MMP) electoral systems** (e.g. Bolivia, Germany, New Zealand, Venezuela), proportional tier voting results are reported. The seats document the final distribution in the national parliament including those won by majority vote.

In the case of **two-round electoral systems** (e.g. France), the data documents the votes gained by each party in the first round of the election and the total number of seats gained after the second round.

In the case of **single-transferable vote systems** (STVs), the number of votes gained by each party refers to voters’ first preferences, while the number of seats reflects the final distribution after all votes have been transferred.

Electoral systems using **panachage** give voters as many votes as there are seats to be distributed in a district. Here, the documentation of votes varies across countries dependent on the sources available. In Luxembourg, our sources provide a “theoretical number of electoral votes per party” since 1994. In other cases, such as El Salvador (after 2015), the sources only provide percentage values based on the total number of voters. Where possible (e.g. Honduras after 2005, Mauritius), we provide the total number of votes gained by each

¹See Shugart and Wattenberg (2001) for a detailed definition and discussion of multi-member electoral systems.

party. Here, the variable *valid_vote* reflects the sum of the votes documented per party and *total_vote* indicates the actual number of citizens who cast at least one vote or voted invalidly.

Variable Information

iso3c	<i>ISO 3166-1 alpha-3 codes</i> Three-letter country codes defined in ISO 3166-1.
iso2c	<i>ISO 3166-1 alpha-2 code</i> Two-letter country codes defined in ISO 3166-1.
cname_en	<i>Country name (English)</i>
edate	<i>Date of national lower house election</i> If the election lasted for several days, the last date was coded. By-elections for single seats or districts are unconsidered.
mmm	<i>Mixed member majoritarian electoral system</i> Binary variable indicating whether a mixed member majoritarian electoral system was in use.
mmm_doc	<i>Mixed member majoritarian electoral system documented</i> Binary variable indicating whether the data documents the results of both tiers in mixed member majoritarian electoral systems. Set to "yes" if either the votes, the seats, or both are documented for the proportional and the majoritarian tier.
electorate/ electorate_2ndtier	<i>Number of eligible voters</i>
total_vote/ total_vote_2ndtier	<i>Total number of votes cast including invalid votes</i>
valid_vote/ valid_vote_2ndtier	<i>Total number of valid votes</i>
total_seats/ total_seats_2ndtier	<i>Total number of seats in the lower chamber</i>

party_id	<p><i>Alphanumeric party code</i></p> <p>Code consists of the iso2c country code and the database-specific party code (see coding below). E.g., the code FR9 denotes the French Communist Party (PCF).</p> <p>Coding:</p> <ul style="list-style-type: none"> 1-599: Political parties 600-799: Electoral pacts and electoral pacts that transformed into political parties 800-879: Regional/Local electoral pacts 880-989: Other parties that are part of an electoral pact 993: Special coding, e.g. "Initiative Committee" 994: Spoilt votes 995: Against all candidates 996: Minorities 997: Others/Independent candidates 998: Independent/Non-partisan candidates 998.5: Independent candidates in the cabinet 999: Other parties 999.5: Members of "other parties" in the cabinet
cmp	<p><i>Manifesto Project party code</i></p> <p>See https://manifesto-project.wzb.eu.</p> <p>Use the variables <i>cname_en</i>, <i>edate</i>, and <i>cmp</i> to join this data with the Manifesto Project data. Currently linked to version 2025a of the Manifesto Project Dataset.</p>
cmp_parfam	<p><i>Manifesto Project party family coding</i></p> <p>See https://manifesto-project.wzb.eu.</p> <p>Coding:</p> <ul style="list-style-type: none"> 10: Ecological party 20: Socialist party 30: Social democratic party 40: Liberal party 50: Christian democratic party 60: Conservative party 70: Nationalist party 80: Agrarian party 90: Ethnic and regional party 95: Special issue party 98: Electoral Alliances without a dominant party 999/NA: Missing information.

pinitials	<i>Party name abbreviation</i>
pname_en	<i>English translation of party name</i>
pname_or	<i>Original party name</i>
votes/ votes_2ndtier	<i>Number of votes gained by each party</i>
v_share/ v_share_2ndtier	<i>Share of votes gained by each party</i>
estimate/ estimate_2ndtier	<i>Estimated election results</i>
	<p>Binary variable indicating whether the number of votes gained by the respective party and the corresponding vote share has been estimated based on the votes gained by an electoral alliance.</p> <p>Calculated if political parties have been part of an electoral alliance and the seat share of the single parties were known, but not their vote shares. In this case, the vote shares were estimated as follows:</p> $(\text{seat}_p / \text{seat}_a) * \text{vote}_a,$ <p>where seat_p denotes the seats won by the party in question, seat_a the seats won by the corresponding electoral alliance, and vote_a the votes won by the electoral alliance.</p> <p>In some cases, two or more political parties presented joint lists in single districts (e.g., Belgium 1946-58 or Norway 1949-1981). Here, the votes of the joint lists were distributed to the individual parties according to their total vote share in the respective election.</p>

v_share_wgt	<p><i>Weighted share of votes gained by each party</i></p> <p>Weighted share of votes gained by each party calculated as follows:</p> $v_share * prop + v_share_2ndtier * maj,$ <p>where <i>v_share</i> is the vote share gained by proportional vote and <i>v_share_2ndtier</i> is the vote share gained by majority vote. <i>prop</i> and <i>maj</i> denote the corresponding weights defined as the sizes of the corresponding tiers in relation to the absolute number of seats in the national lower house.</p> $prop = seats/total_seats$ $maj = seats_2ndtier/total_seats$ <p>In non-MMM electoral systems, this variable equals <i>v_share</i>.</p>
seats/ seats_2ndtier	<p><i>Number of seats gained by each party</i></p>
s_share	<p><i>Share of seats gained by each party</i></p> <p>Variable includes seats won in all tiers in the case of segmented electoral systems.</p>
alliance	<p><i>Categorical indicator for electoral alliances</i></p> <p>Coding: Electoral alliance: Entry is an electoral alliance Electoral alliance member: Entry is part of an electoral alliance</p> <p>For members of electoral alliances, the variables <i>alliance_id</i>, <i>alliance_cmp</i>, <i>alliance_initials</i>, <i>alliance_en</i>, and <i>alliance_or</i> give additional information about the the corresponding electoral pact.</p>
alliance_id	<p><i>Alphanumeric electoral alliance code</i></p> <p>See <i>party_id</i> for additional information.</p>
alliance_cmp	<p><i>Manifesto Project party code</i></p> <p>See https://manifesto-project.wzb.eu.</p> <p>Use the variables <i>cname_en</i>, <i>edate</i>, and <i>alliance_cmp</i> to join this data with the Manifesto Project data. Currently linked to version 2025a of the Manifesto Project Dataset.</p>

alliance_initials	<i>Electoral alliance abbreviation</i>
alliance_en	<i>English translation of electoral alliance name</i>
alliance_or	<i>Original electoral alliance name</i>
region	<i>Region of country</i> Regions as defined in the World Bank Development Indicators.
continent	<i>Continent of country</i> Continents as defined in the World Bank Development Indicators
eu_member	<i>Membership European Union</i>
eu_east	<i>East European member of the European Union</i>
eu_since	<i>Year of entry in European Union</i>
eu_exit	<i>Year of withdrawal from the European Union</i>
oecd	<i>Membership OECD</i>
oecd23	<i>Membership OECD-23</i>
oecd_since	<i>Year of entry in OECD</i>
